

Weather-Proof Equipment

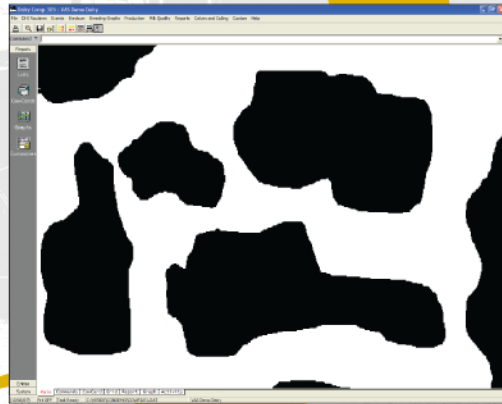

FeedWatch Pro v7.0 uses state-of-the-art weatherproof equipment that will hold up to the rugged abuse of day-to-day operations.

- * **Super-Bright L.E.D. Exterior Display**
California's Central Valley thick fog can't even mask the display from brightly displaying out the feed information.
- * **Simple-To-Use One Button Scale Indicator**
New One-Button functions allows your feeder to spend his time feeding and not pushing buttons.
- * **Military-Grade Wireless Communication**
Wireless communication allows your operation to expand several miles* away from your desktop computer.

DairyComp 305

FeedWatch Pro v7.0 uses a direct connection to the DairyComp 305 database to automatically update your pen counts for each of the pens.

Not only will you have access to the pen counts but you will also be able to bring your milking information from your parlor program. FeedWatch will give you a complete dairy report so you can easily analyze your production vs. cost of your milking herd.

*Distance is determined by terrain

FeedWatch Pro

For Windows

Windows XP & Vista Compatible

Customers regard FeedWatch Pro as:

Flexible
Efficient
Easy
Dependable

"You Can't Manage What You Don't Measure."

Valley Agricultural Software (VAS), as the name implies, is first agriculture then software. While we are very proud of our software products, we're a company born from the agriculture industry.

We know the business, and we know it's always changing. Whether it's herd management, milk production, feed management, surveillance systems, or computer/IT services, VAS pushes the cutting edge to stay on top of your needs. While we are proud of what we have done, we are even more excited about the future. A future defined by increased efficiencies and optimized production, facilitated by technology.

Valley Agricultural Software | 3950 South K Street | Tulare, CA 93274

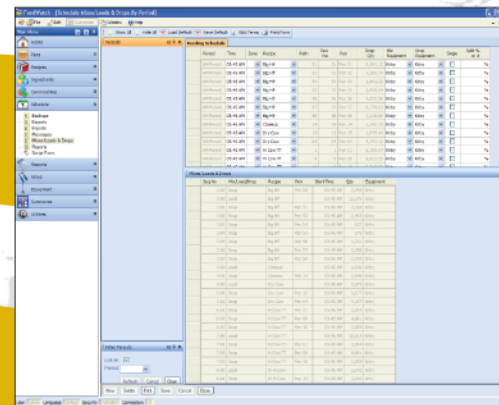

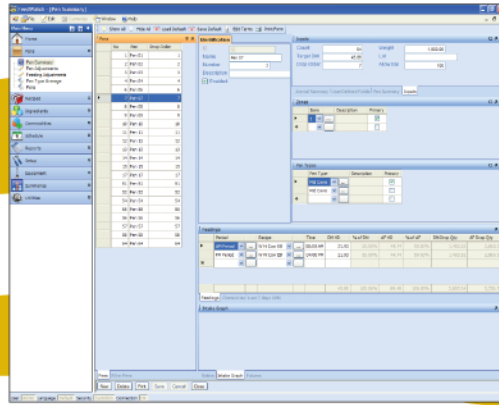

"Built on proven methods, FeedWatch Pro v7.0 is the most comprehensive feed management software on the market. Years of research and development has led to cutting edge technology without sacrificing its simplicity..."

Pen-Centric Design:

The main premise of FeedWatch Pro v7.0... Pen-Centric design displays all of the important information from a single screen.

- ▶ Target DMI
- ▶ Last 7 Days DMI
- ▶ Pen-Level Feeding
- ▶ Chemistries
- ▶ Total Pen Summary
- ▶ Animal Summary
- ▶ Complete Pen History
- ▶ User-Definable Fields

Also, you have the ability to manage: feedings, recipes, ingredients, etc. without leaving the pens screen.

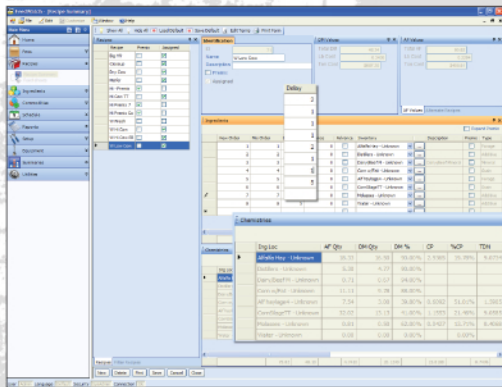

Automatic Scheduling

FeedWatch v7.0 automatically schedules all of your loads. Don't waste your time figuring what each load should be... let the power of FeedWatch do it for you.

"Set it and forget it..." You give FeedWatch the basics of how to feed your herd, it will automatically create and schedule your loads to maximize the capacity of your mixer.

Feedwatch will automatically size loads according to the mixer's capacity. If your main mixer goes down, any size mixer can take its place without any hassles.

Ingredient Mix Timers

Ingredient mix timers allow you to have full control over the mixture of the ration. Some ingredients need longer mixing times, just increase the delay time before the next ingredient.

Complete Chemistries

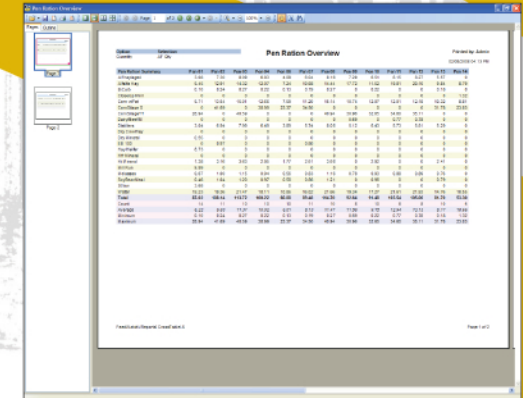

With each ingredient's standard chemistry value listed, you can see the complete nutritional value of your recipe.

Simple Reporting

User-friendly report and graph writer makes it easy for you to access and generate any report you need. From inventory reports for your lender to usage reports by pen types, all can be generated with just a couple mouse clicks.

Auto-Printing

Automatically print reports, graphs or both by any duration (hours, days, weeks, months, etc.) you wish.

FeedWatch Pro v7.0

With the drive to stay on the forefront of feed management, Valley Agricultural Software (VAS), has completely redesigned the FeedWatch software from the ground up. Built on proven methods, FeedWatch Pro, is the most comprehensive feed management software on the market. Years of research and development has led to cutting edge technology without sacrificing it's simplicity. A number of new innovations have been introduced such as: Automatic Scheduling, Ingredient Mix Timers, Revamped Reporting System, and Book Value Chemistries; not to mention the various improvements that we have made to the existing features of FeedWatch.

FeedWatch will help:

- ▶ Eliminate Feed Sheets
- ▶ Monitor Intakes
- ▶ Optimize Feed Expense
- ▶ Analyze Consumption
- ▶ Verify Feeding Accuracy
- ▶ Track Ingredient / Ration Chemistries
- ▶ Track Feed Contracts
- ▶ Reduce Feed Waste
- ▶ Optimize Pen Feedings
- ▶ Track Income Over Feed Price
